Software Engineer

Dammam, Saudi Arabia 7736259100 mohammadsalih096@gmail.com
linkedin.com/in/mohammadsalih portfolio-salih.netlify.app/

Summary

Skilled software developer with 2+ years of experience in mobile and web app development. Proficient in Flutter for cross-platform apps, API integration, state management, and Firebase. Experienced with front-end technologies like Angular, React, HTML, CSS, and JavaScript, focused on building clean, responsive, and scalable interfaces. Seeking opportunities in Saudi-Arabia to apply technical skills and drive innovation.

Work experience

Jr Software Engineer

Aug 2024 - Jun 2025

Infoline Technologies

- Developed **KE Unplugged** using Flutter, seamlessly integrating survey processes into a digital platform with offline survey capabilities and automatic data syncing to enhance collection efficiency and user experience.
- Built the **Infer App**, a scalable and efficient admin panel for creating and managing survey questions using Angular and NestJS, ensuring high performance, modular architecture, and long-term maintainability.
- Designed and optimized PostgreSQL database architecture, improving query performance and maintaining data consistency across both the KE Survey App and Infer App platforms.
- Contributed to building an interactive dashboard using Apache ECharts, enabling real-time visualization of survey responses and actionable insights for the KE Survey and Infer platforms.

Flutter Developer

Sep 2023 - Aug 2024

Progbiz Pvt. Ltd.

- Developed and launched **Sunstar Movers**, a user-friendly app that simplifies intercity furniture and material relocation, featuring real-time tracking and seamless API integration for enhanced user convenience.
- Designed and built **ShopMart**, a modern e-commerce application using Flutter and Firebase, delivering a secure and scalable solution for shopping across Android and iOS platforms.
- Integrated **Google Sign-In** for secure, cross-device user authentication, ensuring a smooth and reliable login experience.
- Implemented dynamic product listings, real-time cart management, and secure checkout with Firestore, leveraging **GetX** for efficient state management and a highly responsive UI.

Python Developer Trainee

Aug 2023 - Nov 2023

Inmakes Infotech Pvt. Ltd.

- Completed an online internship on python full stack, and created a e-commerce website using Django framework.
- Developed an e-commerce website that Allows admin users to add, delete and update product details, including image, description and price.
- Implemented a search option for users to quickly find products based on keywords.

Education

BACHELOR OF TECHNOLOGY IN CS

Jun 2029 - Jul 2023

APJ Abdul Kalam Technological University (KTU)

CGPA : 6.77

Skills

- **Languages:** Dart, JavaScript, Html-5, TypeScript, Python,
- **Technologies**: Flutter, Angular, React, CSS, Firebase, Getx, Provider, Bloc, Node.js, Git, REST APIs, PostgreSQL, PostMan, Django, Flask, Nest.js jQuery, Bootstrap, Android SDK, iOS SDK.
- **Concepts**: State Management, API Integration, Responsive Design, Database Management, CI/CD, Agile Methodology.

Projects

Infer(Survey Web App) | Angular, NestJS, TypeScript, HTML5, JavaScript, CSS, Node.js, SCSS, Clarity, PostgreSQL

- Developed a survey management platform that allows admins to create surveys, generate shareable links, and analyze responses in real time.
- Integrated the Clarity module to enhance the user interface and ensure a seamless, intuitive experience.
- Implemented robust backend APIs with NestJS and PostgreSQL to handle complex survey logic, data storage, andreal-time response analytics efficiently.

KE-Unplugged | Flutter, Dart, Bloc, Flutter-inappwebview, Hive, Figma

- Developed KE-Unplugged, an offline survey app enabling seamless in-person data collection in retail, event, and remote settings.
- Simplified audience feedback gathering with user-friendly survey tools, enhancing data accuracy and field usability

Sunstar Movers | Flutter, Dart, GetX, Hive, Firebase, Shared Preferences, Figma

- Developed a seamless moving management app that tracks moving status, monitors remaining boxes, and automates employee payroll.
- Utilized Hive and Firebase to ensure efficient local and cloud data management, improving overall app performance and scalability.
- Designed an intuitive user interface using Figma, focusing on user experience to simplify moving logistics for both customers and staff.

Airbnb App | Flutter, Dart, Provider, Firebase, Figma

- Built a hotel booking app using Flutter and Firebase, with Google Sign-In, real-time listings, and detailed room descriptions.
- Integrated Firestore for dynamic updates and designed a responsive UI/UX for both Android and iOS platfoms.

Weather-finder | Flutter, Dart, Getx, Figma

- Developed a sleek weather app using Flutter, integrating a real-time weather API to deliver accurate and up-to-date forecasts based on user location.
- Utilized GetX for efficient state management, ensuring smooth data flow and responsive UI updates across the app.
- Designed an intuitive and responsive interface allowing users to easily view current weather conditions, temperature, and location-based weather information on both Android and iOS devices. for an enhanced shopping experience on both Android and iOS platforms.

ShopSmart | Flutter, Dart, Getx, Firebase, Dio, Google sign-in, Firestore, Figma

- Designed and developed a modern e-commerce application using Flutter and Firebase, integrating Google Sign-In to provide secure and seamless user authentication across multiple devices.
- Implemented dynamic product listings, comprehensive cart management, and a secure checkout process, leveraging Firestore's real-time database capabilities to ensure up-to-date inventory and transaction data.
- Applied GetX for efficient and scalable state management, optimizing app performance while delivering a clean, responsive, and intuitive user interface for an enhanced shopping experience on both Android and iOS platforms.

Fake Currency Detecting App | Python, CNN, Deep learning, Image processing

- Built a mobile app using Python and deep learning that detects counterfeit currency notes with high accuracy using Convolutional Neural Networks (CNN).
- Trained and fine-tuned the CNN model on a diverse dataset, improving prediction accuracy and minimizing false positives in counterfeit identification.
- Applied real-time image processing with OpenCV, enabling the app to capture and analyze currency through the device camera for instant detection.
